EPS Block for Fabricators

The use of Expanded Polystyrene (EPS) in packaging and insulation is common knowledge, but many people are not familiar with other, less obvious uses of EPS. From motorcycle helmets to dock flotation to theme park decorations, you may encounter EPS in many different forms every day without realizing it. One of the less well known uses of EPS is that by artists, sculptors, and professional designers.

Cellofoam® EPS foam blocks are about 98% air and as such are lightweight yet surprisingly strong and durable. These blocks are easily shaped, sanded, glued, and painted, making them ideal for custom projects. Artists transform our EPS blocks into a seemingly infinite number of shapes, then use various coatings to provide desired finishes. Cellofoam EPS can be shaped and painted to look like brick or stone and is often used to make props for theater and movie sets. In short, Cellofoam EPS is perfect for a variety of crafting projects - the only limit is your imagination!

ADVANTAGES

Lightweight

Strong: Available in a range of densities for various compressive strengths

Easily Painted or Coated

Long Life

Versatile: Easy to shape

Environmentally Friendly: Cellofoam EPS contains no formaldehyde or ozone-depleting CFCs or HCFCs. It is 100% recyclable and may contain recycled material.
